Option
..
Build BusyBox as a static binary (no shared libs)
Force NOMMU build
Build with Large File Support (for accessing files > 2 GB)
Cross Compiler prefix:
Additional CFLAGS:
Build BusyBox as a static binary (no shared libs) (STATIC)
If you want to build a static BusyBox binary, which does not
use or require any shared libraries, then enable this option.
This can cause BusyBox to be considerably larger, so you should
leave this option false unless you have a good reason (i.e.
your target platform does not support shared libraries, or
you are building an initrd which doesn't need anything but
BusyBox, etc).
